

# NORTHERNSHIELD

## RESOURCES INC.

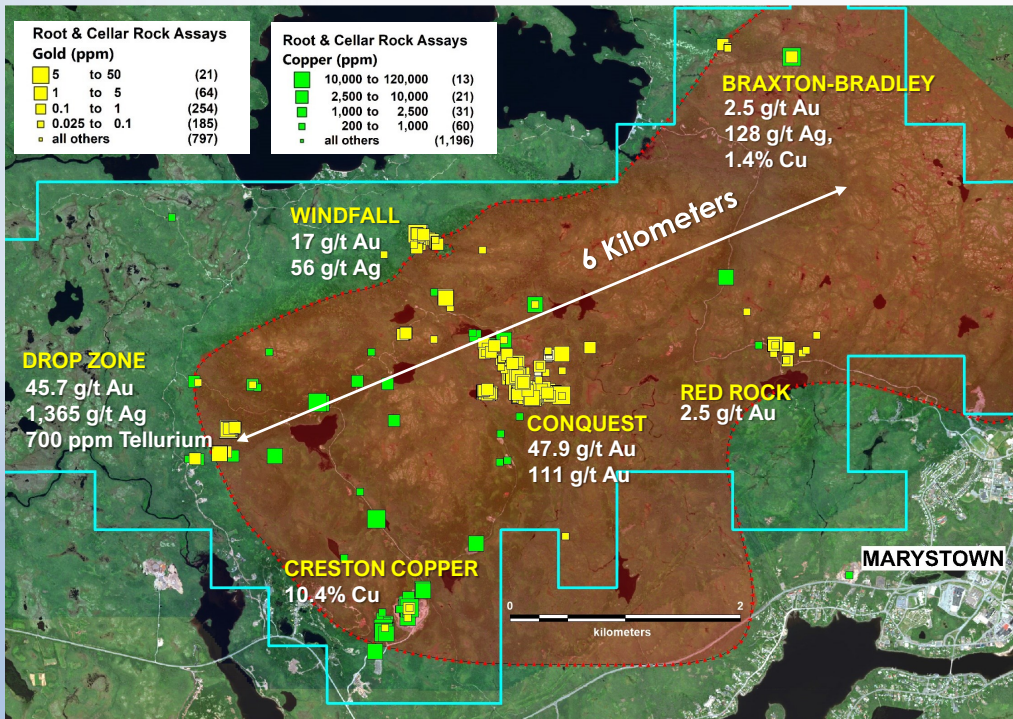

- 01 OUR SPACE** Expansive terranes, new ideas, large targets.
- 02 OUR APPROACH** To generate high quality early-stage exploration targets through a model driven approach.
- 03 OUR VISION** We believe that with new and unexplored terrane comes the opportunity to still discover world class deposits, at or near surface, at low cost. Our model driven approach helps mitigate the risk associated with such early stage projects.
- 04 OUR ASSETS** Northern Shield is focused on exploring and advancing the **ROOT & CELLAR PROPERTY** in Newfoundland where five epithermal gold occurrences over a six kilometre strike-length have been discovered, along with a distinct zone of copper mineralization in a porphyry-type setting.

The mineralization is hosted in an upright and intact volcanic complex including rhyolite spires, channelized basaltic flows and a series of vent and phreato-magmatic breccias.

The geoscience exhibits the hallmarks of being an “alkaline-related” system, making it both unique in eastern Canada and, **HIGHLY PRIZED.**

### COMMODITIES

Gold, Silver, Copper,  
Tellurium (critical metal)

### LOCATION

Newfoundland, Canada

### STOCK SYMBOL

TSX-V: NRN

### DIRECTORS & MANAGEMENT

Russel Richards	Chairman
Ian Bliss	President, CEO, Director
Donald Bubar	Director
Scott Jobin-Bevans	Director
Sam Legg	CFO
Christine Vaillancourt	Chief Geologist

### CORPORATE STRUCTURE

Common Shares O/S	67.4M
Fully Diluted	76.3M
Stock Price	C\$0.05
Market Capitalization	C\$3M
Treasury	C\$100,000
Debt	Nil

## CONQUEST ZONE

“Although much of the exploration at Root & Cellar has focused on the gold, the copper potential is very real and one must remember that epithermal gold and copper porphyry are parts of the same system.”

## CRESTON COPPER SHOWINGS

Vent breccias and magmatic hydro-thermal breccias

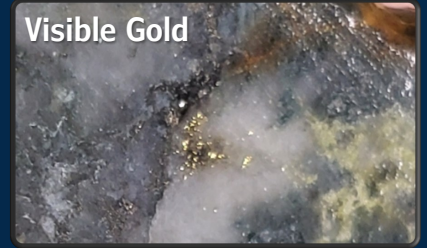

The high-grade copper found to date in the breccias exposed in the quarries are likely the result of mineralized fluids filtering up

It is at the top of such an intrusion where the primary copper mineralization would be expected

- Of the five known gold zones at Root & Cellar, the focus is on the Conquest Zone
- Exploration at Conquest is consistently improving the gold grades and the foot-print
- Conquest provides for near surface resource potential and deeper, high-grade feeders
- Higher grade feeders are now known to be hosted in north-south trending structures identified after first drill program
- Feeders come nearest to surface in central Conquest Zone (CZ1) but an IP geophysical survey has outlined other targets that are now proving to be gold bearing.

Visible Gold

Visible Gold

High-grade Copper

## UPCOMING CATALYSTS

- Results from second IP geophysical survey
- Trenching of near surface IP targets and visible gold area
- Second phase of diamond drilling
