

### NEW EPITHERMAL GOLD DISTRICT IN CANADA

“Northern Shield represents *A Unique Opportunity* to be involved early in the advancement of a new discovery and a developing gold district.”

- In 2018 Northern Shield discovered a low sulphidation epithermal gold system at Shot Rock.
- This is the first known occurrence of epithermal gold in Nova Scotia.
- The discovery was made within 1 km of the Trans-Canada Highway.

- Northern Shield has the right to earn 100% interest of the Root & Cellar Property in Newfoundland.
- There are 4 low sulphidation epithermal gold showings over a 5 km strike-length.
- The property is characterized by the presence of significant silver and tellurium with assays up to 45 g/t Au, 1,365 g/t Ag and 700 g/t Te.

While Northern Shield is known as a leader in executing grassroots exploration programs for Ni-Cu-PGE, we are experienced in many geological terrains and focused on generating high-quality, very early stage projects utilizing a model-driven approach.

This is our wheelhouse:  
new ideas,  
large terranes,  
large-scale targets.

We are currently using our expertise and innovative approaches to model-driven exploration to become first movers on low sulphidation epithermal gold and related deposits in **Atlantic Canada**.

# A UNIQUE OPPORTUNITY...
