

GRAND PABOS PROPERTY

NORTHERNSHIELD
RESOURCES INC.

- Property covers a 9 km stretch of the Grand Pabos Fault
- Subtle perturbation in the orientation of the fault at the Property location likely important for mineralization
- Gold nuggets found in overburden north of the property
- Gold nuggets contain tiny fresh pyrite and arsenopyrite crystals protruding from the gold. The un-weathered nature of the sulphides associated with the gold suggests a very local source

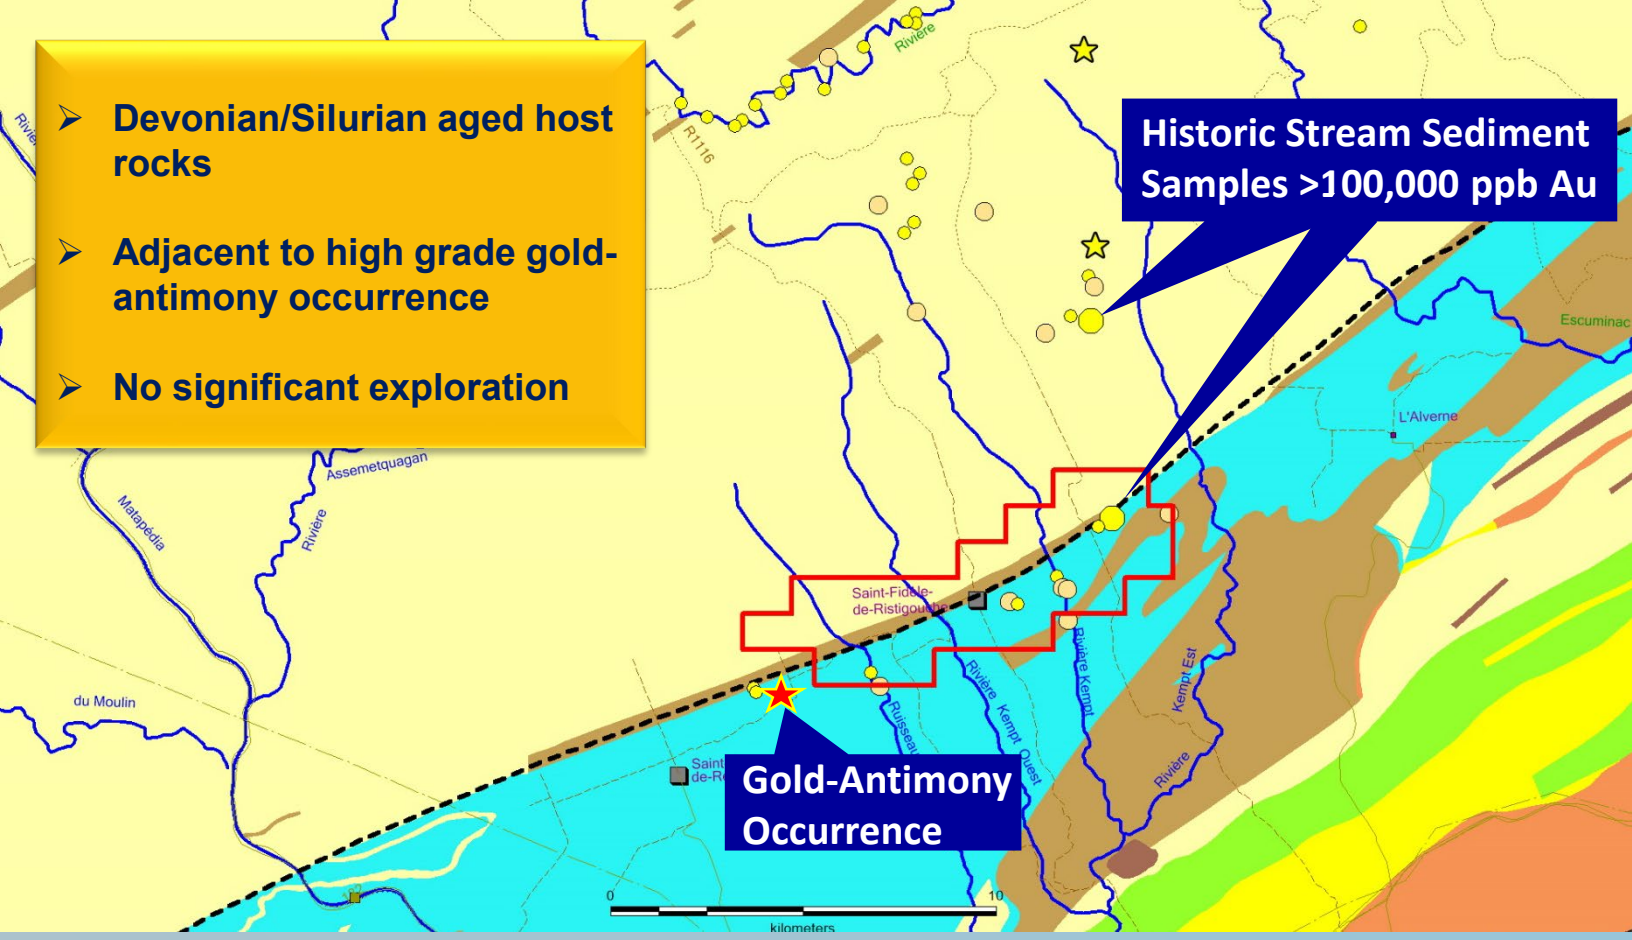

TSXV: "NRN"

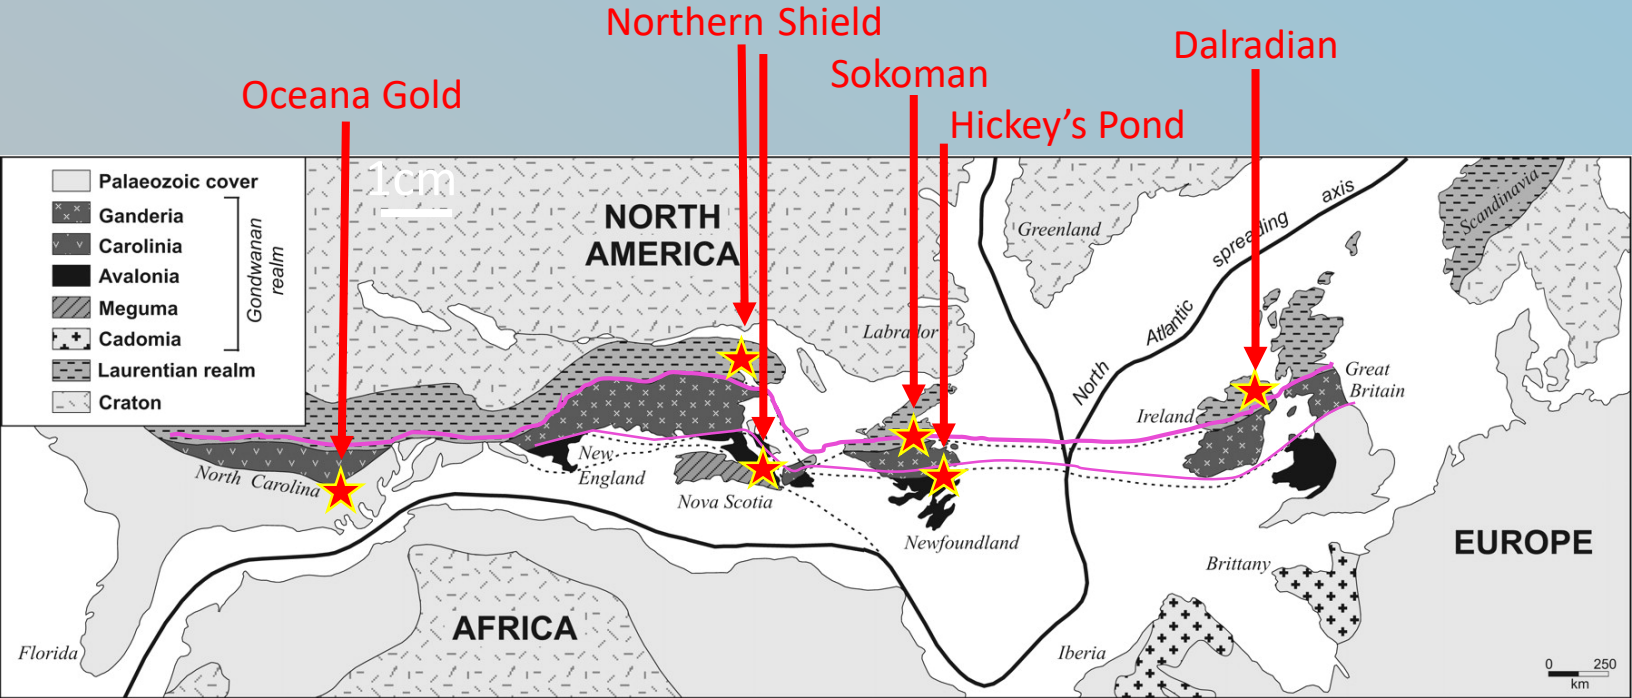

- Devonian/Silurian aged host rocks
- Adjacent to high grade gold-antimony occurrence
- No significant exploration

Historic Stream Sediment Samples >100,000 ppb Au

Gold-Antimony Occurrence

The Shot Rock and Gaspésie properties sit in a belt of rocks that stretches from the Carolinas, through Gaspésie, Nova Scotia, Newfoundland, Ireland and into Scotland. Recent success along this belt highlight its potential to host significant gold deposits.
